

Mobility has reinvented the way we do business

A person wearing a blue jacket and a red helmet stands at the end of a narrow, arched ice tunnel. The tunnel is carved into a massive block of ice, with the walls and ceiling showing distinct horizontal layers. The ice has a deep blue color, and the light coming from the exit at the far end creates a bright glow. The floor of the tunnel is covered in snow and small ice chunks. The overall atmosphere is cold and majestic.

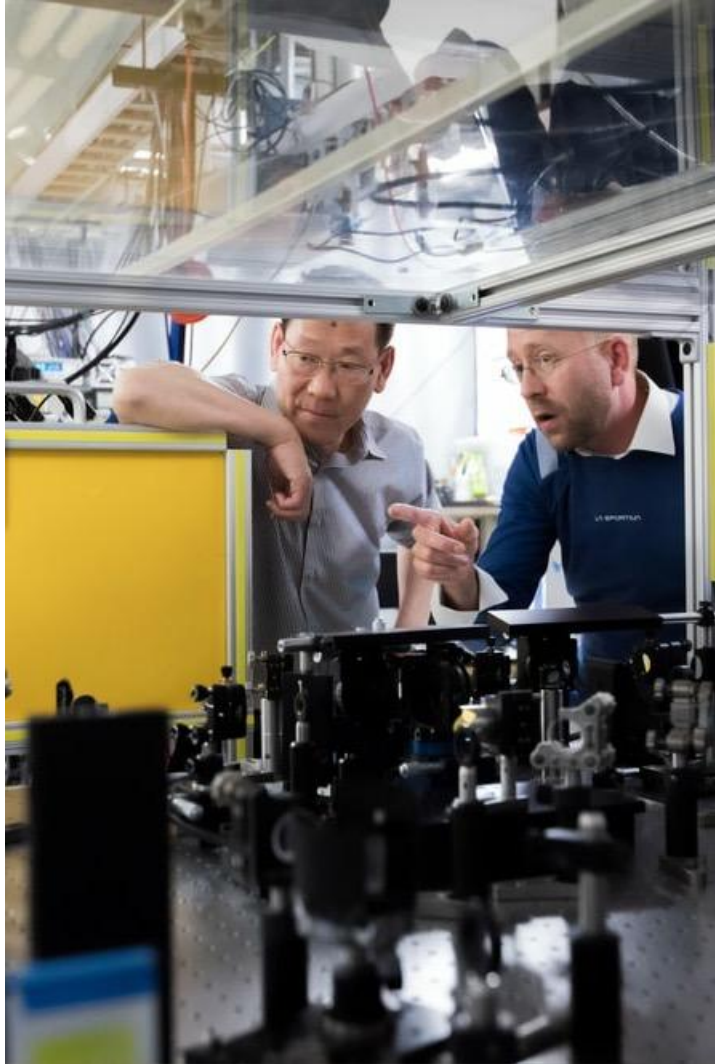

and given us the freedom to travel farther than ever before

—but this has come at a price.

Electric mobility can help reduce transport's impact on the environment.

Businesses play a key role in making this happen.

Since 2010, our electric vehicle charging solutions

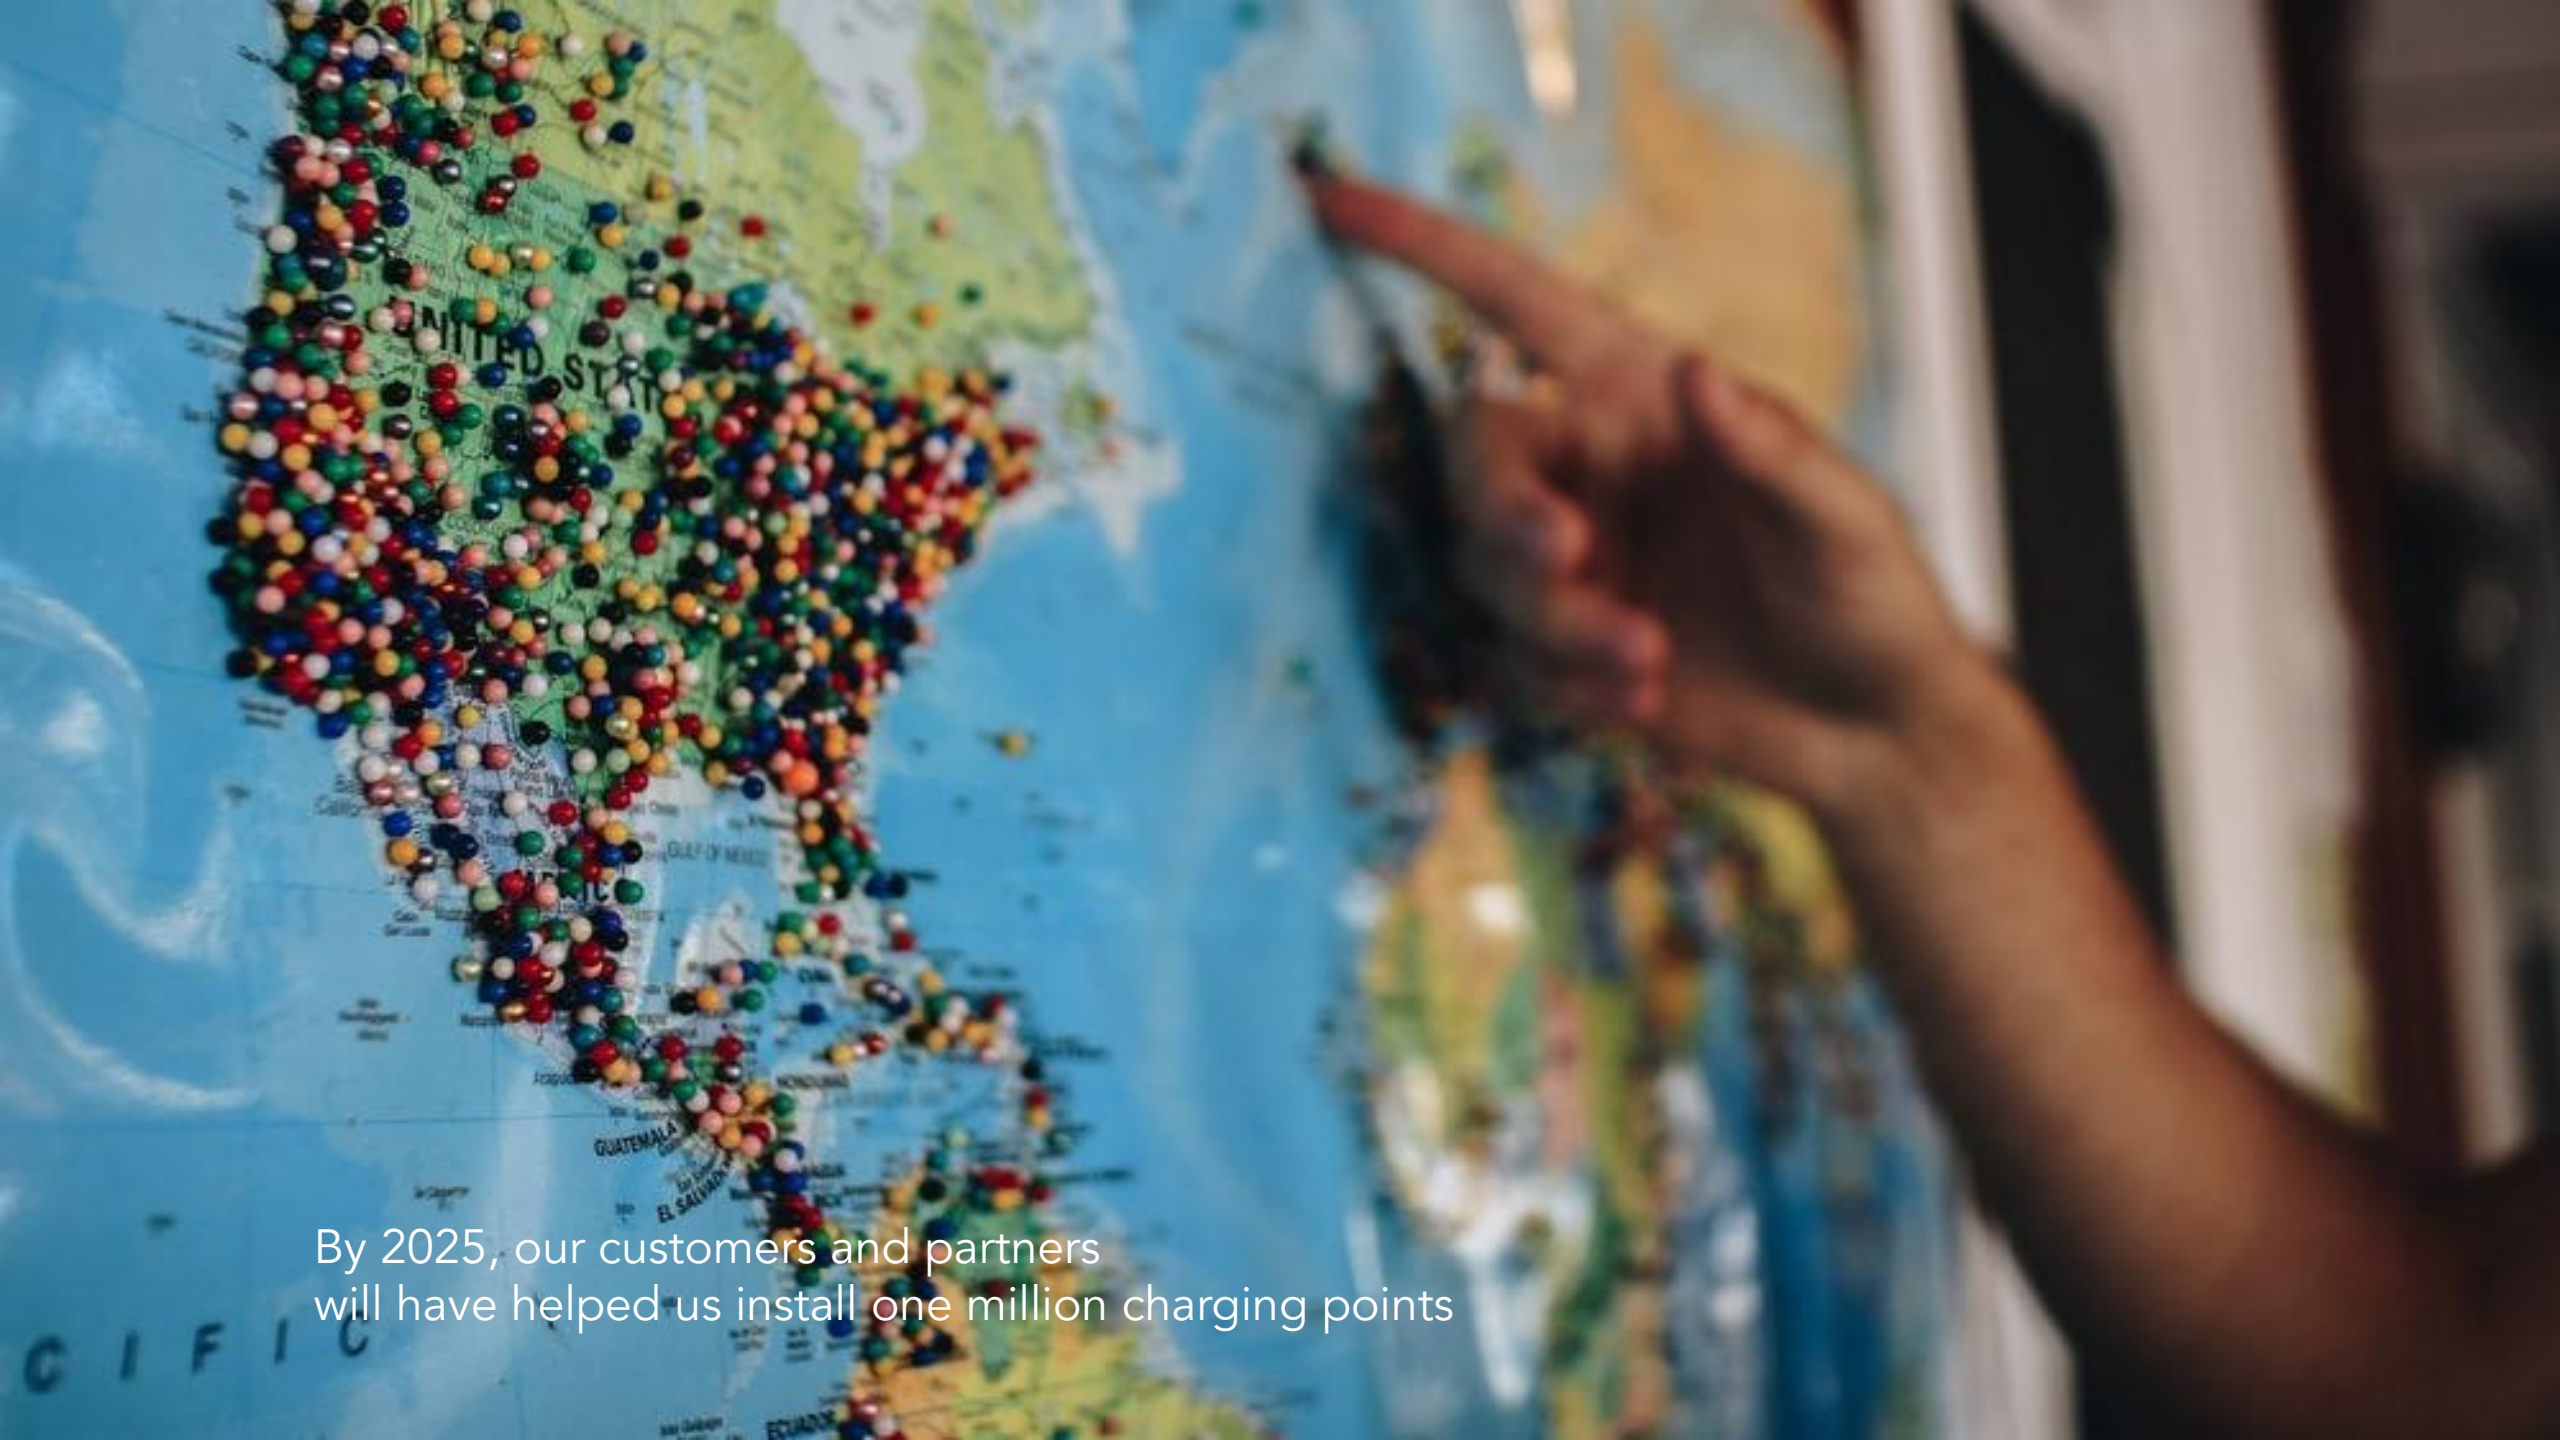

have helped thousands of
forward-thinking businesses around the world

emission

adopt electric mobility and achieve their goals.

By 2025, our customers and partners
will have helped us install one million charging points

to make transport cleaner and more accessible.

As charging needs to evolve,
we provide the infrastructure and tools

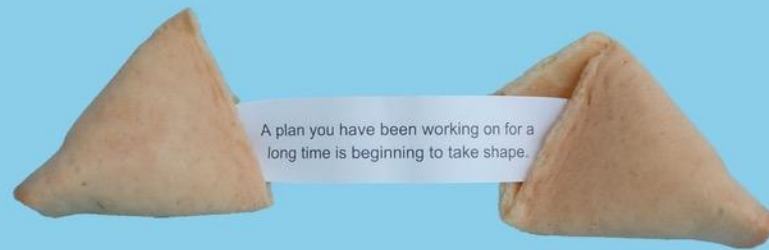

needed to adopt and facilitate electric mobility

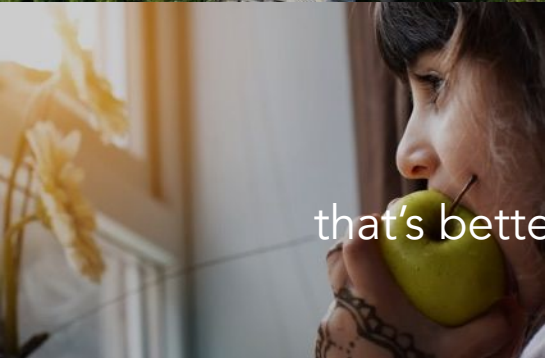

—along with all the support
to keep customers happy and vehicles on the move.

Working together,

we can shape a sustainable future of transportation

that's better for everyone.

Powering our sustainable future
